## **Hinge Device**

### **Abstract**

In the case of a hinge device (11, 20) with an arm (5) and with two head pieces (2, 7) mounted to pivot/swivel on the ends of the arm (5) around respectively one axis, the head pieces (2, 7) are respectively joined to revolve with one of the two belt pulleys (3, 6), which are circumscribed by a common traction belt (4) on one circumferential surface, and at least one of the belt pulleys (3, 6) is not circular but preferably elliptical.
